*The new counter came into full operation on the 3<sup>rd</sup> May. With the counter now located in a much larger fish pass with greater flow, there appears to be a greater number of Brown Trout moving up and down on a daily basis compared to the old fish pass. Until the figures are processed at the end of the year to produce Salmon and Trout totals, **the figures should only be used as an indication of fish movements rather an assessment of fish abundance.** In due course we should be able to produce provisional monthly totals by size or for salmon and trout rather than just a total.*

## *Gala counter provisional results*

NOTE : These are unprocessed figures and will change slightly on complete analysis

*July total for 2018 cannot currently be produced due to limited access to the fish counter computer, which is located on private property and broadband access doesn't currently work*

*NA = fish counter out of operation*

<sup>1</sup> Fish counter restarted half through August after scanner repair and electricity reconnection. Prolonged period of very low water, so very few fish would have been missed.

*The figures in brackets are the numbers of Salmon, when these are available (there is not always time at the end of each month to identify all the images). If there is no figure in brackets for a month, the total is for both salmon and trout combined. When fish run in coloured water, identification rates are reduced and therefore the Salmon figure may not be an accurate representation of the actual number*

1 Counter out of operation from the 14th-30 September

2Counter out of operation from the 23rd June to the 5th July
